      The product does not contain any relevant quantities of materials with critical values that have to be monitored at the workplace.
    - Additional information: The lists valid during the making were used as basis.
  - 8.2 Exposure controls
    - Personal protective equipment:
      - General protective and hygienic measures:
        The usual precautionary measures are to be adhered to when handling chemicals.
        Avoid contact with the eyes and skin.
      - Respiratory protection: Use suitable respiratory protective device only when aerosol or mist is formed.
      - Protection of hands:
        Only use chemical-protective gloves with CE-labelling of category III.
        The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
        Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation
      - Material of gloves
        Nitrile rubber, NBR
        Recommended thickness of the material: ≥ 0.4 mm
        The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
      - Penetration time of glove material
        For the mixture of chemicals mentioned below the penetration time has to be at least 480 minutes (Permeation according to EN 374 Part 3: Level 6).
        The determined penetration times according to EN 374 part III are not performed under practical conditions. Therefore a maximum wearing time, which corresponds to 50% of the penetration time, is recommended.
        The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
