SECTION 8: Exposure controls/personal protection

8.1 Control parameters
- Additional information about design of technical facilities: No further data; see item 7.
- Ingredients with limit values that require monitoring at the workplace:
  The product does not contain any relevant quantities of materials with critical values that have to be
  monitored at the workplace.
- Additional information: The lists valid during the making were used as basis.

8.2 Exposure controls
- Personal protective equipment:
  - General protective and hygienic measures:
    The usual precautionary measures are to be adhered to when handling chemicals.
    Avoid contact with the eyes and skin.
    Do not inhale gases / fumes / aerosols.
  - Respiratory protection: Use suitable respiratory protective device only when aerosol or mist is formed.
  - Protection of hands:
    Only use chemical-protective gloves with CE-labelling of category III.
    The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
    Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation
    - Material of gloves
      Nitrile rubber, NBR
      Recommended thickness of the material: ≥ 0.4 mm
      Neoprene gloves
      The selection of the suitable gloves does not only depend on the material, but also on further marks of quality
      and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the
      resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the
      application.
    - Penetration time of glove material
      For the mixture of chemicals mentioned below the penetration time has to be at least 480 minutes
      (Permeation according to EN 16522-1:2015: Level 6).
      The determined penetration times according to EN 16523-1:2015 are not performed under practical
      conditions. Therefore a maximum wearing time, which corresponds to 50% of the penetration time, is
      recommended.
      The exact break through time has to be found out by the manufacturer of the protective gloves and has to be
      observed.
  - Eye protection: Safety glasses
  - Body protection: Protective work clothing
