- 8.2 Exposure controls
  - Personal protective equipment:
    - General protective and hygienic measures:
      The usual precautionary measures are to be adhered to when handling chemicals.
      Avoid contact with the eyes and skin.
    - Respiratory protection: Use suitable respiratory protective device only when aerosol or mist is formed.
  - Protection of hands:
    Only use chemical-protective gloves with CE-labelling of category III.
    The glove material has to be impermeable and resistant to the product/ the substance/ the preparation.
  - Material of gloves
    - Nitrile rubber, NBR
      Recommended thickness of the material: ≥ 0.5 mm
      The selection of the suitable gloves does not only depend on the material, but also on further marks of quality
      and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the
      resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the
      application.
  - Penetration time of glove material
    - For the mixture of chemicals mentioned below the penetration time has to be at least 480 minutes
      (Permeation according to EN 16523-1:2015: Level 6).
      The determined penetration times according to EN 16523-1:2015 are not performed under practical
      conditions. Therefore a maximum wearing time, which corresponds to 50% of the penetration time, is
      recommended.
    - Eye protection: Safety glasses
    - Body protection: Protective work clothing
