AGITAN® 150

TECHNICAL INFORMATION

Defoamer for aqueous systems

Composition: Aqueous emulsion of polysiloxane copolymer with hydrophobic silica

Appearance: liquid

Colour: white, turbid

Typical Properties:
- Active ingredients: approx. 23%
- Consistency: approx. 700 mPas
- Density at 20°C: approx. 1.00 g/cm³
- Solubility in water: miscible in any ratio
- pH (undiluted): approx. 7

Properties/applications: AGITAN 150 is a polysiloxane emulsion with excellent stability and defoaming persistency. The defoamer is miscible with water in all ratios. AGITAN 150 is resistant to alkaline environment. It can be used between pH 6 and 11.

Main applications:
- Industrial and wood coatings
- Printing inks
- Adhesives
- Emulsion manufacturing

Recommended levels/use: Ladder studies are recommended to determine optimum level. Normal dosage ranges from 0.05 to 0.5% on finished product. AGITAN 150 is typically added undiluted during pigment grinding for optimum distribution and de-aeration. For most efficient use 2/3 of AGITAN 150 is added to the pigment dispersion and 1/3 is added to the letdown.

Storage/handling: AGITAN 150 is not sensitive to freezing, but for better handling it should be stored between 5°C and 25°C. Frozen product must be defrosted and homogenized by stirring before use. The product may slightly separate on storage. Then AGITAN 150 should be mixed before use. The minimum shelf life in closed containers is 9 months from the date of manufacture.

Packaging: Totes holding 1000 kg net, drums holding 150 kg net and kegs holding 25 kg net.

Our technical suggestions are based on data from many experiments and cannot represent a warranty of any kind as to their performance in other formulations. Customers must always verify our product’s performance in their own systems. This technical data sheet replaces all previous issues.
