LUBA-print 725

TECHNICAL INFORMATION

Chemical description: Wax dispersion / Wachsdispersion

Application/properties: Rheology-modifying wax emulsion to improve the effect pigment orientation in aqueous coatings.

Processing information: 5 - 9 % of this wax emulsion to be added to the lacquer while stirring. After the incorporation of LUBA-print 725 AMP 90 can be used to neutralize the final formulation. The pH-value should be adjusted to a range of approx. 7.3 - 8.0.

Solid: Functional blend

Emulsifier-system: anionic

Solvent: Water

The product described in this Technical Data Sheet is not yet a standard product. The indicated limits are preliminary data and can be specified only after 5 produced batches.

Storage: In original closed containers lasting at least 12 months at temperatures between 5-35°C. Stir well before use! Protect from frost! After long storage, particularly after usage of some of the product, evaporation of water is possible and visible signs of particles may be present. We therefore recommend filtration of the product before use.

Our technical suggestions are based on data from many experiments and cannot represent a warranty of any kind as to their performance in other formulations. Customers must always verify our product’s performance in their own systems. This technical data sheet replaces all previous issues.
