LUBA-print W 5725

TECHNICAL INFORMATION

Chemical description: Wax dispersion / Wachsdispersion

Processing information: 1 - 4 % of this wax dispersion to be added to the lacquer or printing ink while stirring

Solid: Polyethylene-wax

Emulsifier-system: non - ionic

Solvent: Water

Technical data:

The product described in this Technical Data Sheet is not yet a standard product. The indicated limits are preliminary data and can be specified only after 5 produced batches.

Storage: In original closed containers lasting at least 9 months at temperatures between 5-35°C. Stir well before use! Protect from frost! After long storage, particularly after usage of some of the product, evaporation of water is possible and visible signs of particles may be present. We therefore recommend filtration of the product before use.

Our technical suggestions are based on data from many experiments and cannot represent a warranty of any kind as to their performance in other formulations. Customers must always verify our product’s performance in their own systems. This technical data sheet replaces all previous issues.
