TECHNICAL INFORMATION

Polymeric thickener for aqueous systems

Composition: Hydrophobically modified acrylic copolymer emulsion, anionic

Appearance: liquid

Colour: white, turbid

Typical Properties:
- Active ingredients: approx. 31 %
- Viscosity: low viscous
- Density at 20°C: approx. 1.05 g/cm³
- pH (undiluted): approx. 3

This information is intended as a guideline only and should not be used to issue specifications. Slight deviations do not affect application and capability of the product. For specifications please consult the Certificate of Analysis.

Properties/applications:
TAFIGEL AP 10 is a synthetic thickener designed for universal use in low to high PVC systems. In comparison to common HASE thickeners it shows a stronger associative thickening character. TAFIGEL AP 10 requires an alkaline pH-value (>8) for optimum efficiency.

Main applications:
- Decorative Coatings
- Industrial and wood coatings
- Architectural coatings
- Adhesives
- Printing inks
- Paper coatings

Recommended levels/use:
TAFIGEL AP 10 is supplied as low viscous emulsion. Neutralisation results into a high viscous solution. Ladder studies are recommended to determine optimum addition levels. Normal dosage ranges from 0.1 - 4.0 % on total formulation.

Storage/handling:
TAFIGEL AP 10 is sensitive to freezing and temperatures above 50°C and should be stored between 5 and 25°C. The product must be stirred well before use. The minimum shelf life in closed containers is 15 months from the date of manufacture.

Packaging:
Totes de 1000 kg net, drums holding 150 kg net and kegs holding 25 kg net.
